Intervuo

Create and Deploy Custom Voice Agents with Ease

Problem & Solution

Problem

- Complex AI voice agent creation
- Time-consuming development
- Challenging deployment and integration

Solution: Intervuo

- User-friendly web platform
- Customizable domain-specific agents
- Easy deployment

Key Features

Intuitive Agent Creation

- Personalize with Name, and Avatar
- Choose from a variety of voices and languages

Behaviour Customization

- Choice between LLMs for agents
- Define agent greeting
- Set Agent Prompt

Knowledge Integration

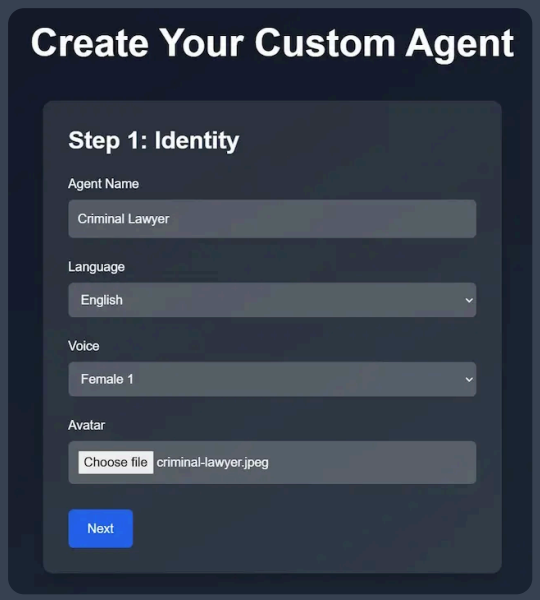
- Upload documents to define agent expertise
- Provide knowledge text

Flexible Deployment

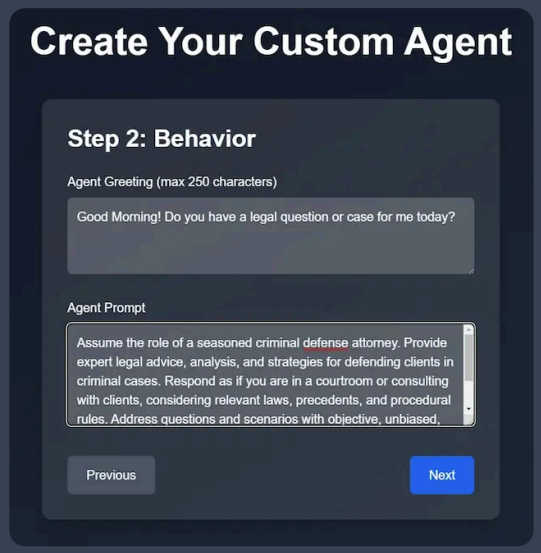
- Use directly on Intervuo platform
- Integrate via API with external platforms (Future)

User Journey: Creating an Agent

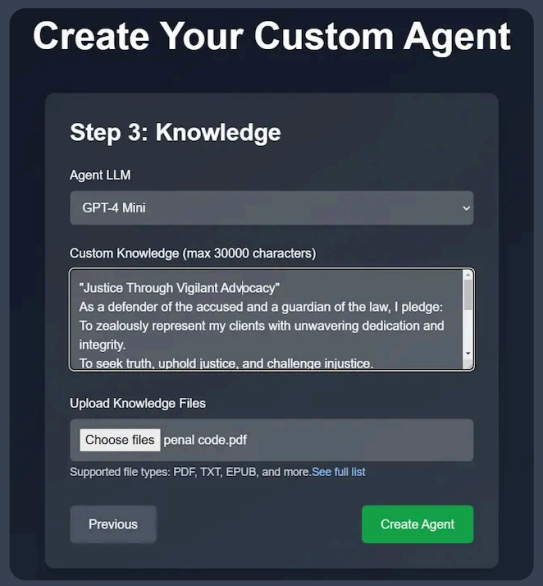
Step 1: Identity



Step 2: Behavior



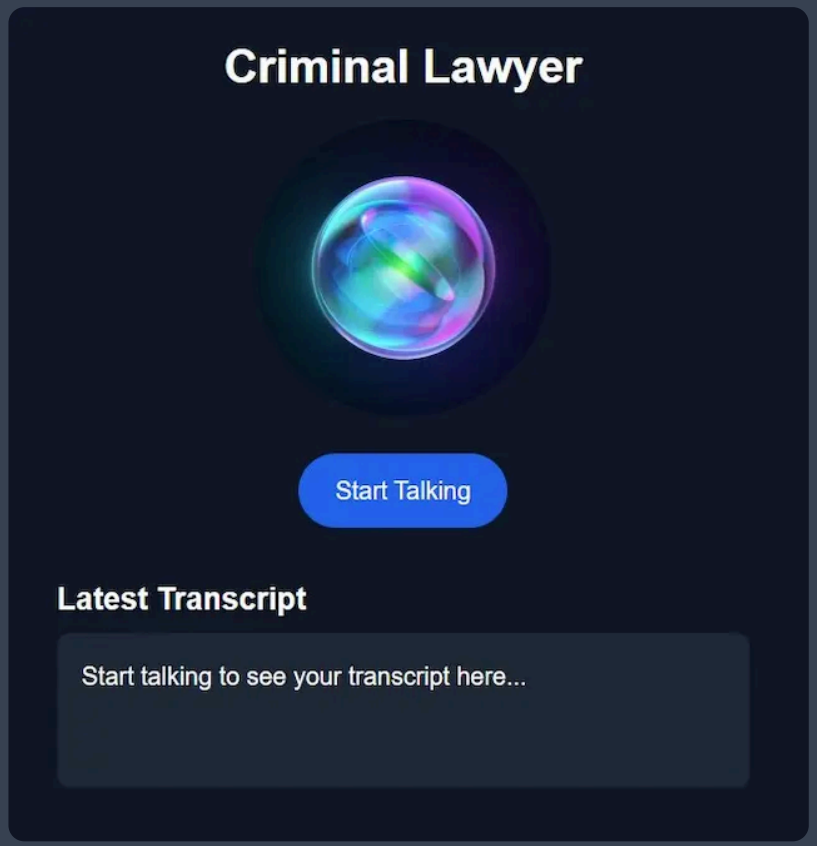
Step 3: Knowledge



User Journey: Agent Management and Interaction

Manage Agents

Interact with Agent



Technology & Architecture

Frontend

React with Next.js

Backend

Django Web Framework, Celery, Redis, JSON Web Tokens

LLM Integration

OpenAI's GPT-4 variants

Database

MySQL

Text to Speech Solution

ElevenLabs API

Infrastructure

Google Cloud Platform, Docker

Scalability & Future Potential

Scalable Architecture

- Cloud First Architecture for easy scaling
- Message Broker for handling tasks
- Containerization with Docker
- Security with JWT

Potential Integrations

- Customer service
- Education assistance
- Health care information
- Legal awareness

Roadmap

- Integrate with external platforms
- Add more LLM providers
- Add custom voices
- WebSockets for real-time interactions
